CSCI 4000 Assignment 5

Total estimated time for this assignment: 12 hours (if you are a good programmer)

The main purpose of this assignments is to apply and implement **MVC** (Model-view-controller) software architectural pattern. It is a continuation of the last assignment (assignment 4). You can copy your code from the last assignment (provided your code is correct and working). If you do not use MVC pattern, you will receive **0 points** for almost all the questions. The description for each question includes images of how the page should appear in a browser, along with specifications.

The main programming language for this assignment should be **PHP** (mixed with HTML and CSS). If you do not use **PHP**, you will get **0 points**. For this assignment, you must use **PDO** (PHP Data Object) to interface with the MySQL database. If you do not use PDO, you will receive 0 points for almost all questions.

When you see "Richard Ricardo" or "richardricardo" in the examples and screen captures, change it to **<your name>**.

When you see "Richard" or "richard" in the example screen captures, change it to **<your first name>**. If you do not put **<your name>** / **<your first name>** in the above mentioned fields, you will get **0 points** for the question(s).

No two students should submit webpages with exactly the same code, content, layout, or color combination. If found, both students will get 0 points.

Create a folder on your hard disk, name the folder **lastname_firstname_assignment5**. Save all the files from this assignment in this folder.

Use XAMPP web server solution stack package to help debugging PHP code. It will make your debugging process easier. All php files must not produce any error, or any warning (-2 points for each error, each warning). Your program must run. A program that does not run will get at most 50% of the possible points. All files must begin with a comment that identifies the author, the course code, and the program date (- 2 points each question if found missing). All html, css and php files must be clearly documented (commented). Points will be taken off (-2 points each question) for insufficient comments (<!---->, /* */, //).

- Before adding PHP code, all html files must pass html validation at <u>http://validator.w3.org/</u> without any error (and with only 1 warning).
- When you view page source in a web browser, <!DOCTYPE html> must be at the top of every page. In other words, all pages must be written in HTML5. (-20 points if not)
 - You can put php code before <! DOCTYPE html>.
 - You cannot put html code before <! DOCTYPE html>.
- All css files must pass css validation at http://jigsaw.w3.org/css-validator/ without any error. (-2 points for each error/warning, only 1 warning is allowed for html validator)

Estimated time: 2 hours

Question 1 – **MVC**: PHP Chapter 5, eg010 step 1 (20 points)

- In this question you need to
 - Setup MVC folders
 - Re-create the database if necessary
 - o Create a database connection file
 - Create a common header file
 - Create a common footer file
 - Create a database error view file (using common header file and common footer file)
 - Create the first php library file for retrieving data from the database (major table)
- Re-load create_db.sql in XAMPP > phpMyAdmin again (if necessary) to re-create the database mentioned in the last Assignment. (1 point)
- Save question 1 files in subfolder "lastname_firstname_assignment5\q1\:
 - create the following subfolders in this folder: (4 points)
 - lastname_firstname_assignment5\q1\errors\
 - lastname_firstname_assignment5\q1\model\
 - lastname_firstname_assignment5\q1\student_manager\
 - lastname_firstname_assignment5\q1\view\
- Reuse the text file **create_db.sql**, created in the last Assignment, Q1. Copy the text file to folder lastname_firstname_assignment5\. (1 point)
 - Note: In the real world, do NOT put sql files in a website folder. Keep it offline and safe.
- You may reuse the **main.css** file from the last Assignment, Q2. Copy the css file to folder lastname_firstname_assignment5\. (1 point)
- Create file richard_ricardo_database.php in folder lastname_firstname_assignment5\q1\model\ (2 points)
 - $\circ \quad Hence: lastname_firstname_assignment5\q1\model\richard_ricardo_database.php$
 - \circ Use this file to connect to the database
 - If there is any connect error, redirect to
 - $lastname_firstname_assignment5\q1\errors\richard_ricardo_database_error.php$
- Split the original richard_ricardo_database_error.php (from last Assignment, Q2) into 3 files (and edit code) (3 points)
 - $\circ \quad lastname_firstname_assignment5\q1\view\richard_ricardo_header.php$
 - common header for all view files
 - link to main.css

0

- lastname_firstname_assignment5\q1\view\richard_ricardo_footer.php
 common footer for all view files
 - lastname firstname assignment5\q1\errors\richard ricardo database error.php
 - it should display database connection error message
 - it should "include" richard ricardo header.php file
 - it should "include" richard ricardo footer.php file
- Create file richard_ricardo_major_db.php in folder lastname_firstname_assignment5\q1\model\ (2 points)
 - Hence: lastname firstname assignment5\q1\model\richard_ricardo_major_db.php
 - Create this php function in the file
 - function get_major_name(\$major_id) { return \$major_name; }
 - This function should take in a major id and return the major name, by querying the database
- Create controller file index.php in folder lastname_firstname_assignment5\q1\student_manager\ (6 points)
 - o Hence: lastname_firstname_assignment5\q1\student_manager\index.php
 - "Require" the following two files:
 - /model/richard_ricardo_database.php
 - /model/richard_ricardo_major_db.php
 - o Create controller code to handle if \$action == 'list_students' (first time access)

- List \$major_id as "1", and \$major_name as "Computer Science", for testing only
- Files created/updated in this question:
 - o lastname firstname assignment5\q1\errors\richard ricardo database error.php
 - o lastname firstname assignment5\q1\model\richard ricardo database.php
 - o lastname firstname assignment5\q1\model\richard ricardo major db.php
 - o lastname firstname assignment5\q1\student manager\index.php
 - o lastname firstname assignment5\q1\view\richard ricardo footer.php
 - o lastname firstname assignment5\q1\view\richard ricardo header.php

Question 2 – MVC: PHP Chapter 5, eg010 step 2 (20 points) Estimated time: 2 hours

- In this question you need to
 - Create model functions to retrieve major records and student records from the database
 - Update controller code to list students
 - Create code to display students (using common header file and footer file)
- Copy what you have done in question 1 (all folders/files) from the question 1 subfolder to the question 2 subfolder "lastname firstname assignment5\q2\".
- Save question 2 files in subfolder "lastname_firstname_assignment5\q2\:
 - Add files to / editing existing files in the subfolders:
 - lastname_firstname_assignment5\q2\errors\
 - lastname firstname assignment5\q2\model\
 - lastname_firstname_assignment5\q2\student_manager\
 - lastname_firstname_assignment5\q2\view\
- Update file lastname_firstname_assignment5\q2\model\richard_ricardo_major_db.php (4 points)
 Create this php function in the file
 - function get majors() { return \$majors; }
 - This function should return all major names sorted by majorID, by querying the database
- Create file richard_ricardo_student_db.php in folder lastname_firstname_assignment5\q2\model\ (4 points)
 - Hence: lastname_firstname_assignment5\q2\model\richard_ricardo_student_db.php
 - Create this php function in the file
 - function get_students_by_major(\$major_id) {return \$students;}
 - This function should return all student names sorted by studentID, in a particular major (take in a particular majorID), by querying the database
- Update file lastname_firstname_assignment5\q2\student_manager\index.php (6 points)
 - "Require" the following additional file:

- /model/richard_ricardo_student.php
- o Update controller code to handle if \$action == 'list_students' (first time access)
- o Retrieve all students' records by using some functions in
 - model\richard ricardo student db.php
 - model\richard ricardo major db.php
- o "Include" a new file richard_ricardo_student_list.php to display all students
- Create file richard_ricardo_student_list.php in folder
 - lastname_firstname_assignment5\q2\student_manager\ (6 points)
 - Hence: lastname_firstname_assignment5\q2\student_manager\ richard ricardo student list.php
 - This file is related to the index.php from the last assignment
 - It should "include" richard ricardo header.php file
 - It should "include" richard ricardo footer.php file
 - It should display all students by a major
- Files created/updated in this question:
 - o lastname firstname assignment5\q2\model\richard ricardo major db.php
 - o lastname firstname assignment5\q2\model\richard ricardo student db.php
 - o lastname firstname assignment5\q2\student manager\index.php
 - o lastname firstname assignment5\q2\student manager\richard ricardo student list.php

Example: \student manager\index.php (first major is selected/clicked) localhost/my.php/ricardo_richard_assignment5/q2/student_manager/

Question 3 – MVC: PHP Chapter 5, eg010 step 3 (20 points) Estimated time: 2 hours

- In this question you need to
 - Create model function to delete a student record from the database
 - Update controller code to handle student record deletion
- Copy what you have done in question 2 (all folders/files) from the question 2 subfolder to the question 3 subfolder "lastname_firstname_assignment5\q3\".
- Save question 3 files in subfolder "lastname_firstname_assignment5\q3\:
 - Add files to / editing existing files in the subfolders:
 - lastname_firstname_assignment5\q3\errors\
 - lastname_firstname_assignment5\q3\model\
 - lastname_firstname_assignment5\q3\student_manager\
 - lastname_firstname_assignment5\q3\view\
- Update file lastname_firstname_assignment5\q3**student_manager\index.php** (10 points)
 - o Update controller code to handle if \$action == 'delete_student'
 - o Delete a student's record by using function delete student in
 - model/richard ricardo student db.php (to be created next)
 - Update file lastname firstname assignment5\q3\ model\richard_ricardo_student_db.php (10 points)
 - Create php function in the file
 - function delete student(\$student id){}
 - This function should delete a student record by taking in the student ID, by updating the database
 - This function should be called by index.php
- Files created/updated in this question:
 - $\circ \quad lastname_firstname_assignment5\q3\model\richard_ricardo_student_db.php$
 - lastname_firstname_assignment5\q3\student_manager\index.php

Example: \student manager\index.php (before deletion, click on the delete button on Student ID 5)

Question 4 – MVC: PHP Chapter 5, eg010 step 4 (20 points) Estimated time: 2 hours

• In this question you need to

0

- Update controller code to add a student
- Create code to display a form to allow adding a student (using common header file and footer file)
- Copy what you have done in question 3 (all folders/files) from the question 3 subfolder to the question 4 subfolder "lastname_firstname_assignment5\q4\".
- Save question 4 files in subfolder "lastname_firstname_assignment5\q4\:
 - Add files to / editing existing files in the subfolders:
 - lastname_firstname_assignment5\q4\errors\
 - lastname_firstname_assignment5\q4\model\
 - lastname firstname assignment5\q4\student manager\
 - lastname_firstname_assignment5\q4\view\
- Update file lastname_firstname_assignment5\q4\student_manager\index.php (10 points)
 - o Update controller code to handle if \$action == 'show add form'
 - Retrieve all majors' records by using a function in
 - model/richard ricardo major db.php
 - The records will be used to create dropdown list in the next step
 - "Include" a new file richard_ricardo_student_add.php to display a form to add student
- Create file richard ricardo student add.php in folder
 - lastname_firstname_assignment5\q4\student_manager\ (10 points)
 - Hence: lastname_firstname_assignment5\q4\student_manager\ richard ricardo student add.php
 - This file is related to the richard_richardo_add_student_form.php from the last assignment
 - It should "include" richard_ricardo_header.php file
 - It should "include" richard_ricardo_footer.php file
 - It should display a form to allow users to add a student

- Files created/updated in this question:
 - o lastname_firstname_assignment5\q4\student_manager\index.php
 - o lastname firstname assignment5\q4\student manager\richard ricardo student add.php

Example: \student_manager\index.php (it actually shows/"include" richard_ricardo_student_add.php) localhost/my_php/ricardo_richard_assignment5/q4/student_manager/?action=show_add_form $\forall C = 1$ $\uparrow Trovi search$

Question 5 – MVC: PHP Chapter 5, eg010 step 5 (20 points)

- In this question you need to
 - Update controller code to add a student
 - Check if user filled in all form fields
 - Create code to display error message (using common header file and footer file) if any form field is left empty

Estimated time: 2 hours

- Update model code to add a student
- Copy what you have done in question 4 (all folders/files) from the question 4 subfolder to the question 5 subfolder "lastname_firstname_assignment5\q5\".
- Save question 5 files in subfolder "lastname_firstname_assignment5\q5\:
 - Add files to / editing existing files in the subfolders:
 - lastname_firstname_assignment5\q5\errors\
 - lastname_firstname_assignment5\q5\model\
 - lastname_firstname_assignment5\q5\student_manager\
 - lastname_firstname_assignment5\q5\view\
 - Update file lastname_firstname_assignment5\q5\student_manager\index.php (7 points)
 - o Update controller code to handle if \$action == 'add_student'
 - Retrieve all forms filed passed from richard_ricardo_student_add.php (last question)
 - If any form field is empty, create error message and "include" a new file
 - \errors\richard_ricardo_error.php to display error message
 - If all form fields are filled, call function add_student in
 - model/richard_ricardo_student_db.php (to be created next)
- Create file richard_ricardo_error.php in folder lastname_firstname_assignment5\q5\errors\ (6 points)
 - o Hence: lastname_firstname_assignment5\q5\errors\ richard_ricardo_error.php
 - This file is related to the richard_ricardo_error.php from the last assignment
 - It should "include" richard_ricardo_header.php file
 - It should "include" richard_ricardo_footer.php file
 - It should display an error message from index.php
- Update file lastname_firstname_assignment5\q5\ model\richard_ricardo_student_db.php (7 points)
 - Create this php function in the file
 - function add_student(\$major_id, \$firstname, \$lastname, \$gender){}
 - This function should add a student record by taking in the above arguments, and by updating the database
 - This function should be called by index.php

Example: \student_manager\index.php (it actually shows/"include" richard_ricardo_error.php): If any textbox is left empty, richard_ricardo_error.php page should be shown.

Example: \student_manager\index.php (it actually shows/"include" richard_ricardo_student_add.php): user input

Add Stu	Ident						
Major:	Computer Science	¥					
First Name:	JENNY						
Last Name:	CHAN						
Gender:	Female 🗸						
	Add Student						
View All St	udents						
View All St	<u>udents</u>						

Example: \student manager\index.php: after successfully adding a student record localhost/my_php/ricardo_richard_assignment5/q5/student_manager?major_id=1 V C V + A A I I

Student L	.ist								
Majors	Computer Science								
<u>Computer</u> <u>Science</u>	Student ID	First Name	Last Name	Gender					
Electrical	1	PO	BLACK	М	Delete				
Engineering Business	2	SHIFU	HOFFMAN	М	Delete				
DUSITICSS	3	TIGRESS	JOLIE	F	Delete				
	4	JENNIFER	YUH	F	Delete				
	12	JENNY	CHAN	F	Delete				
	Add Student								

Important:

- 1. If you do not put **<your name>** / **<your first name>** in the above mentioned fields (as shown in the examples), you will get **0 points** for the question(s).
- 2. No two students should submit webpages with exactly the same code, content, layout, or color combination. If found, both students will get **0** points.
- 3. Before adding PHP code, all html files must pass html validation at <u>http://validator.w3.org/</u> without any **error** (and with only 1 warning). Use the validator's "File Upload" tab to check each file.
 - a. If you want to validate a PHP file after adding PHP code, you can temporarily rename the *.php file to *.htm file.
 - b. When you view page source in a web browser, <!DOCTYPE html> must be at the top of every page. In other words, all pages must be written in HTML5. (-20 points if not)
 - c. If any html error is found, 2 points will be deducted for each error. Please validate the files before adding PHP code.
- 4. All css files must pass css validation at <u>http://jigsaw.w3.org/css-validator/</u> without any **error**.
- 5. If your files do not pass the html and css validations, **2 points will be deducted** for **each html or css error** found (no deduction for php error at html validation).
- 6. Document (comment) your HTML files (<!-- -->), CSS files (/* */), and PHP files (/* */ OR //). Points will be taken off for insufficient comments (<!-- -->, /* */, //).

Submission instructions:

- You need to test all document(s).
- Do screen capture(s) of the **input** and the related **output(s)**. Use any graphic editing software (e.g. Microsoft Paint, Adobe Fireworks, GIMP, or Microsoft Expression Design etc) to cut out the browser output (from the screen capture), paste them into a word document.
- Provide 2 different test cases for each question. In other words, for each question, you may need to have 2 input screen captures and 2 related output screen captures.
- Do NOT need to do screen capture(s) of html validation results and css validation results for this assignment.
- Save the word document as a pdf file.

You need to submit the following:

1. A pdf file containing the screen capture(s) of the web browser input and output pages, name the file **lastname_firstname_assignment5.pdf**.

2. All html file(s), php file(s), css file(s), and other related files (e.g. image files). Zip your file folder (lastname_firstname_assignment5) into a single zip file (or rar file) lastname_firstname_assignment5.zip. In the above example, the zip file should contain the following files and subfolders. If there is any image, there should be a \images\ subfolder.

- lastname_firstname_assignment5\q1*.* (all files created in question 1)
- lastname firstname assignment5 q^2 *. (all files created in question 1 & 2)
- lastname firstname assignment5 $\q3\$ * (all files created in question 1, 2 & 3)
- lastname firstname assignment5\q4*.* (all files created in question 1, 2, 3 & 4)
- lastname firstname assignment5\q5\main.css
- lastname firstname assignment5\q5\errors\richard ricardo database error.php
- lastname firstname assignment5\q5\errors\richard ricardo error.php.php
- lastname firstname assignment5\q5\model\richard ricardo database.php
- lastname firstname assignment5\q5\model\richard ricardo major db.php
- lastname_firstname_assignment5\q5\model\richard_ricardo_student_db.php
- lastname firstname assignment5\q5\student manager\index.php
- lastname firstname assignment5\q5\student manager\richard ricardo student add.php
- lastname firstname assignment5\q5\student manager\richard ricardo student list.php

- lastname firstname assignment5\q5\view\richard ricardo footer.php
- lastname firstname assignment5\q5\view\richard ricardo header.php

Please submit the above mentioned two files (.pdf and .zip) to D2L digital dropbox.

Grading guidelines (programming questions):

Your programs will be judged on several criteria, which are shown below.

- Correctness (50%): Does the program compile (run) correctly? Does the program do what it's supposed to do?
- Design (20%): Are operations broken down in a reasonable way (e.g. classes and methods)?
- Style (10%): Is the program indented properly? Do variables have meaningful names?
- Robustness (10%): Does the program handle erroneous or unexpected input gracefully?
- Documentation (10%): Do all program files begin with a **comment** that identifies the author, the course code, and the program date? Are all the classes, methods and data fields clearly **documented** (commented)? Are unclear parts of code **documented** (commented)? (Some items mentioned may not apply to some languages)

A program that does not compile (run) will get at most 50% of the possible points.
