Dr. Leong Lee

CSCI 5060 Assignment 4

Total estimated time for this assignment: **12 hours** (if you are a good programmer)

The main programming language for this assignment should be **PHP** (mixed with HTML and CSS). If you do not use **PHP**, you will get **0 points**. For this assignment, you must use **PDO** (PHP Data Object) to interface with the MySQL database. If you do not use PDO, you will receive 0 points for almost all questions.

When you see "Richard Ricardo" or "richardricardo" in the examples and screen captures, change it to **<your** name>

When you see "Richard" or "richard" in the example screen captures, change it to **your first name**. If you do not put **your name** / **your first name** in the above mentioned fields, you will get **0 points** for the question(s).

No two students should submit webpages with exactly the same code, content, layout, or color combination. If found, **both** students will get **0 points**.

Please change the provided example's layout and color combination (color scheme). If you use (copy) ANY of the provide example's color combination, 10 points will be deducted (-10 points).

Create a folder on your hard disk, name the folder **lastname_firstname_assignment4.** Save all the files from this assignment in this folder.

Use XAMPP web server solution stack package to help debugging PHP code. It will make your debugging process easier. All php files must not produce any error, or any warning (-2 points for each error, each warning). Your program must run. A program that does not run will get at most 50% of the possible points. All files must begin with a comment that identifies the author, the course code, and the program date (- 2 points each question if found missing). All html, css and php files must be clearly documented (commented). Points will be taken off (-2 points each question) for insufficient comments (<! -- -->, /* */, //).

- When you view page source in a web browser, <!DOCTYPE html> must be at the top of every page. In other words, all pages must be written in HTML5. (-20 points if not)
 - You can put php code before <! DOCTYPE html>.
 - o You cannot put html code before <! DOCTYPE html>.
- Before adding PHP code, all html files must pass html validation at http://validator.w3.org/ without any error (and with only 1 warning).
- After adding PHP code, the generated html code (Firefox web browser > right-click > view page source) must also pass html validation at http://validator.w3.org/ without any error (and with only 1 warning).
- All css files must pass css validation at http://jigsaw.w3.org/css-validator/ without any error. (-2 points for each error/warning, only 1 warning is allowed for html validator)

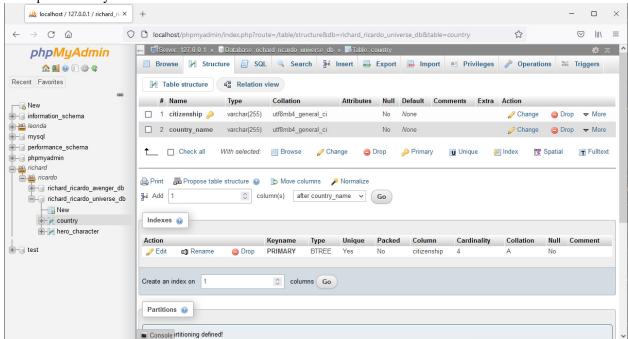

Question 1 – Database: PHP Chapter 4, eg009 and knowledge of SQL (20 points) Estimated time: 3 hours

- Save question 1 files in folder "lastname firstname assignment4": (2 points)
 - o create db.sql
- Create a text file **create db.sql**, write sql statements in the file to
 - o Create a MySQL database richard ricardo universe db. (2 points)
 - o In the database, create 2 tables. (2 points)
 - country
 - hero character

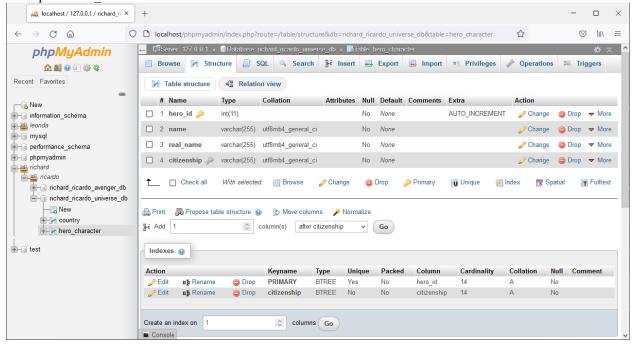

- Create the following fields (columns) for the tables (refer to examples below for details).
 - country table: citizenship, country name (2 points)
 - hero character table: hero id, name, real name, citizenship (2 points)
- Do foreign key referencing, to maintain referential integrity (3 points)
 - One character can only have one country.
 - One country can be used by many characters.
 - citizenship is the primary key of the country table.
 - hero id is the primary key of the hero character table.
 - citizenship is a foreign key of the hero_character table, for any values of citizenship appearing in the hero_character table, these values must also appear in the country table.
- o Insert test records to country table and hero character table. (3 points)
- Create a MySQL database username **richardinternet** with password **richardcinema**, with data privileges (select, insert, update, delete) for the **richard_ricardo_universe_db** database. (4 points)
- All above must be done by SQL statements in the text file create db.sql. (0 points if not)
- Load **create db.sql** in XAMPP > phpMyAdmin to create the above mentioned database.
- Note: In the real world, do NOT put sql files in a website folder. Keep it offline and safe.

Example: "richard ricardo universe db" database and the tables ₩ localhost / 127.0.0.1 / richard_ric× + → C 6 5.7 \bigcirc \equiv lιι\ phpMyAdmin <u>↑</u> ■ • • • Recent Favorites Filters New ⊕── information_schema Containing the word: leonda Table A Rows @ Type Collation mysql mysql country 🁚 📰 Browse 🖟 Structure 🍳 Search 👫 Insert 🖷 Empty 🥥 Drop 4 InnoDB utf8mb4_general_ci 16.0 KiB performance_schema hero_character +-- phpmyadmin 14 InnoDB utf8mb4_general_ci 32.0 KiB ichard 👜 2 tables 18 InnoDB utf8mb4_general_ci 48.0 KiB Sum 0 B in ardo + ichard ricardo avenger db Check all With selected: nichard ricardo universe db Print B Data dictionary +- country +- hero_character Create table test Number of columns: 4 **^** Name: Go ■ Console

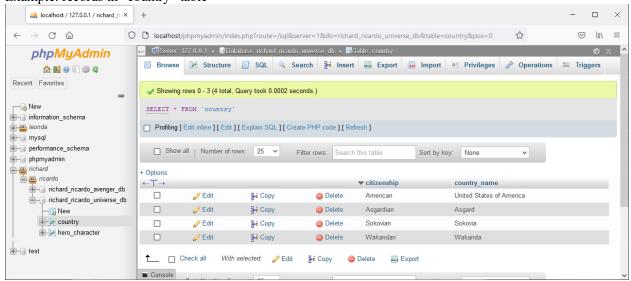

Example: "country" table structure

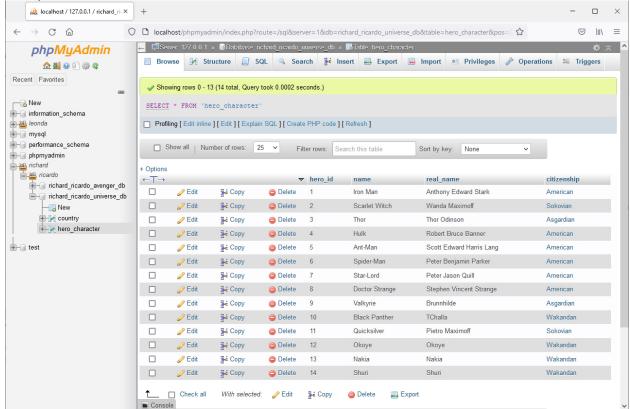

Example: "hero character" table structure

Example: records in "country" table

Example: records in "hero character" table

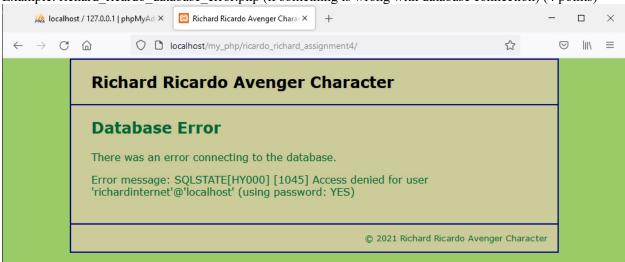

Question 2 – Display: PHP Chapter 4, eg009 and knowledge of SQL (35 points) Estimated time: 4 hours

- Save question 2 files in "lastname_firstname_assignment4": (4 points)
 - o index.php
 - o main.css
 - o richard ricardo database.php
 - o richard ricardo database error.php
- Create web page(s) that displays the default information (example shown).
- The initial page and related outputs should look like the examples shown below.
- Create your page(s) using "Richard Ricardo Avenger Character" as the page title(s) (<title> tag). (2 points)
- Save the first page as index.php. (1 point)
- Create file richard ricardo database.php (php code only, no html code) to connect to database
 - O Use PDO (PHP Data Object) to interface with your MySQL database.
 - o Connect to the **richard_ricardo_universe_db** MySQL database (created in Q1), using username **richardinternet** with password **richardcinema**.
 - Use try {} catch () {} exception handling to detect if the connection is successful.
 - If the connection is not successful, show an error page richard ricardo database error.php.
- Create a css file named **main.css** to format all pages by creating your own layout (no two students should have the same layout). You should use **the same css file** to format all questions. (6 points)
- index.php
 - O Uses richard ricardo database.php to connect to the database.
 - o The sidebar on the left displays a list of records from the "country" table (created in Q1).
 - The main portion of the page lists the records from the "hero_character" table (created in Q1), for that country.
 - If a user wants to view the characters in another country, the user can click on the link for that country.
 - o The display on the main portion of the page changes accordingly as shown in examples.

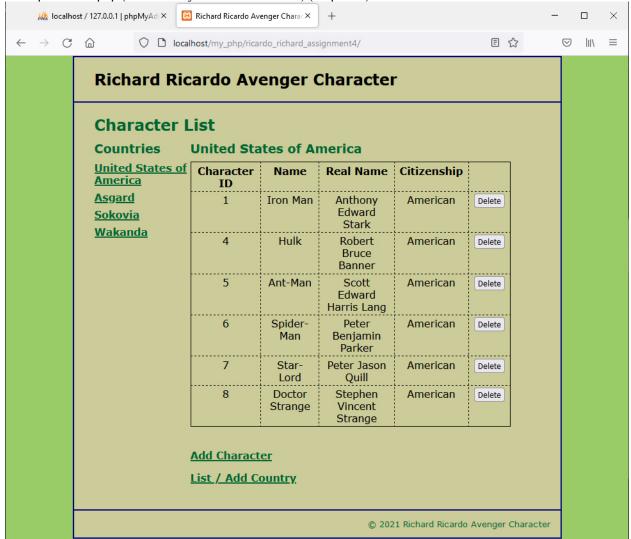

Example: richard ricardo database.php (shows nothing, only has php code) (3 points)

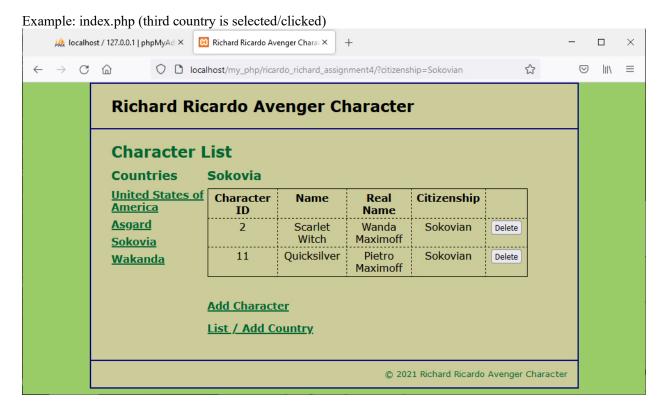

Example: richard ricardo database error.php (if something is wrong with database connection) (4 points)

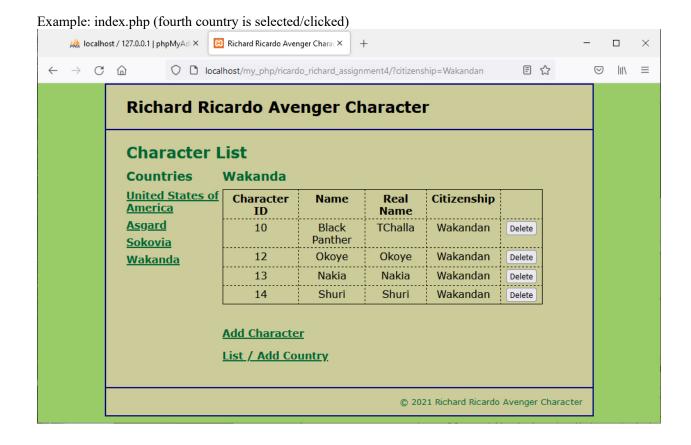

Example: index.php (first country is selected/clicked) (15 points)

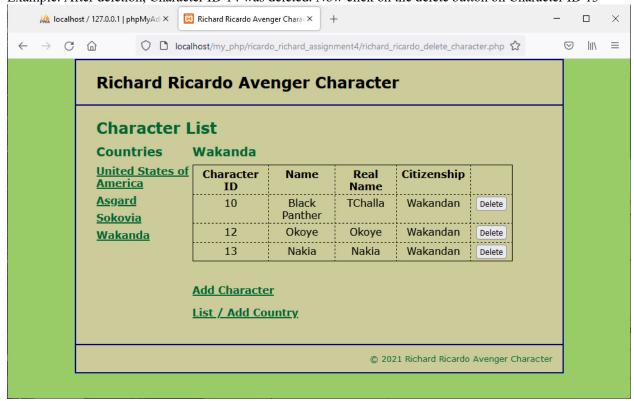

Question 3 – Delete Character: PHP Chapter 4, eg009 and SQL (20 points) Estimated time: 3 hours

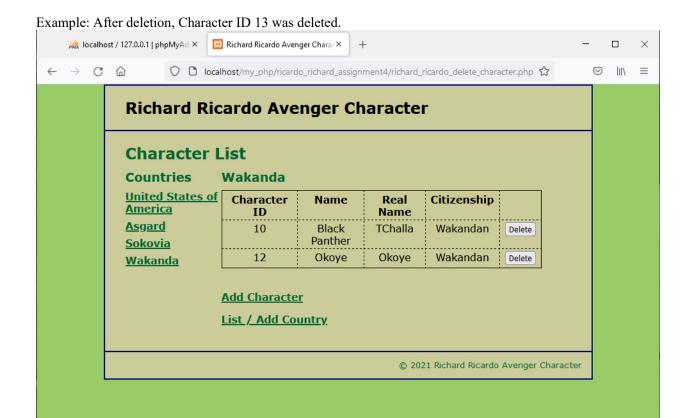

- Save question 3 files in folder "lastname_firstname_assignment4". (2 points)
 - richard_ricardo_delete_character.php
- The initial page and related outputs should look like the examples shown below.
- Create your page(s) using "Richard Ricardo Avenger Character" as the page title(s) (<title> tag). (2 points)
- When a user clicks on a "Delete" link on index.php, (16 points)
 - o the user should be directed to richard ricardo delete character.php.
 - o richard_ricardo_delete_character.php uses **richard_ricardo_database.php** to connect to the database.
 - the selected character record will be deleted from the database table "hero character".
 - o index.php will be shown again with updated records.

Example: index.php, before deletion, click on the delete button on Character ID 14

Example: After deletion, Character ID 14 was deleted. Now click on the delete button on Character ID 13

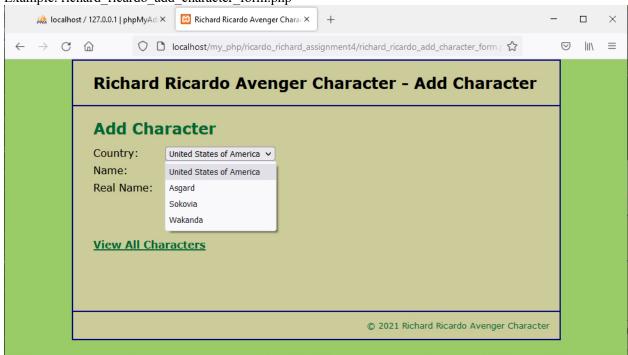

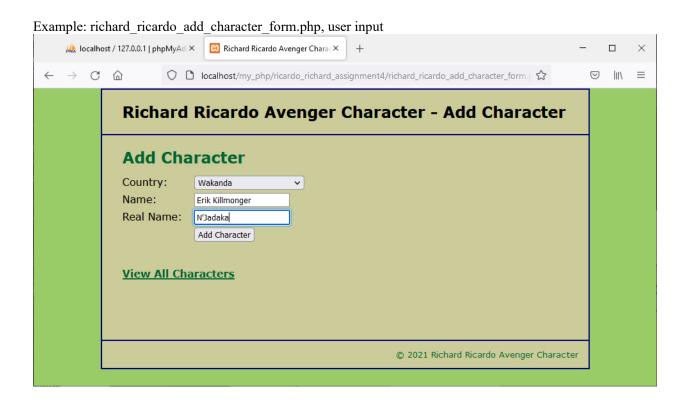

Question 4 – Add Character: PHP Chapter 4, eg009 and SQL (25 points) **Estimated time:** 4 hours

• Save question 4 files in folder "lastname firstname assignment4". (2 points)

- o richard ricardo add character form.php
- o richard ricardo add character.php
- o richard ricardo error.php
- The initial page and related outputs should look like the examples shown below.
- Create your page(s) using "Richard Ricardo Avenger Character" as the page title(s) (<title> tag). (2 points)
- When a user clicks on "Add Character" link on index.php, (21 points)
 - o the user should be directed to richard ricardo add character form.php.
 - o a link "View All Characters" gives the user option to go back to index.php.
 - o richard_ricardo_add_character_form.php uses **richard_ricardo_database.php** to connect to the database.
 - A dropdown list will show all countries by retrieve records from "country" database table (created in Q1).
 - After the user keyed in new character data, and press the submit (Add Character) button, richard_ricardo_add_character.php will be used to add record to the "hero_character" database table, and index.php will be shown again with updated records.
 - richard_ricardo_add_character.php uses richard_ricardo_database.php to connect to the database.
 - If the user left any textbox empty, richard ricardo error php page will be shown.

Example: richard ricardo add character form.php

Example: after successfully adding record

Example: richard_ricardo_error.php page: If any textbox is left empty, richard_ricardo_error.php page will be shown.

Question 5 Extra Credit – List / Add Country: (20 points)

- Save question 5 files in folder "lastname firstname assignment4". (1 point)
 - o richard ricardo country list.php
 - o richard_ricardo_delete_country.php
 - o richard ricardo add country.php
- The initial page and related outputs should look like the examples shown below.
- Create your page(s) using "Richard Ricardo Avenger Character" as the page title(s) (<title> tag). (1 point)
- When a user clicks on a "List / Add Country" link on index.php, (2 points)
 - o the user should be directed to richard ricardo country list.php.
 - o richard ricardo country list.php uses richard ricardo database.php to connect to the database.

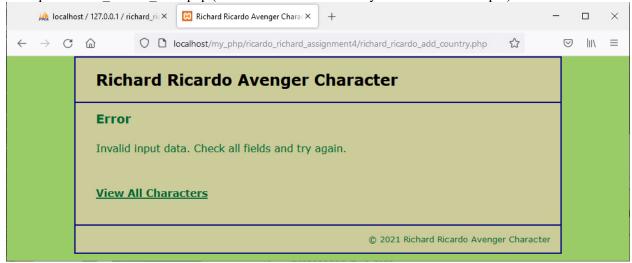

Estimated time: 4 hours

- o records from the "country" table will be displayed.
- When the user click on "Add Country" button without keying in anything, richard_ricardo_error.php page (created in Q4) will be shown. (4 points)
- When the user key in some country, and click on "Add" button, (4 points)
 - o the user should be directed to richard ricardo add country.php.
 - o richard ricardo add country.php uses richard_ricardo_database.php to connect to the database.
 - o user input will be added to "country" database table.
 - richard ricardo country list.php will be shown again with updated records.
- When the user click on a "Delete" link on richard ricardo country list.php, (8 points)
 - o the user should be directed to richard ricardo delete country.php.
 - o richard ricardo delete country.php uses richard ricardo database.php to connect to database.
 - o the selected record will be deleted from the database table "country".
 - o richard ricardo country list.php will be shown again with updated records.
 - Oue to foreign key referencing, user should not be able to delete any "country" record with "hero_character" record linked to it (Q1).

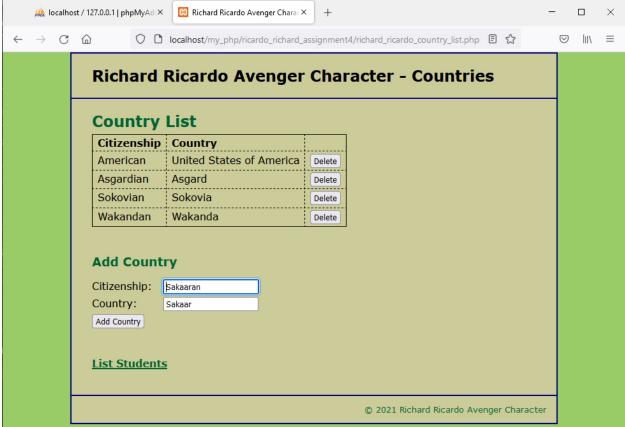

Example: richard ricardo country list.php //>
//>
//>
// Iocalhost / 127.0.0.1 / richard_ric×

| Sichard Ricardo Avenger Charac× П ○ localhost/my_php/ricardo_richard_assignment4/richard_ricardo_delete_country.pl 目 ☆ Richard Ricardo Avenger Character - Countries **Country List** Citizenship **Country** American United States of America Delete Asgardian Asgard Delete Sokovian Sokovia Delete Wakandan Wakanda Delete **Add Country** Citizenship: Country: Add Country **List Characters** © 2021 Richard Ricardo Avenger Character

Example: richard ricardo error.php (user clicks on "Add Country" without textbox input)

Example: richard ricardo country list.php (user input "Sakaar")

Example: richard_ricardo_country_list.php (after user input, "Sakaar" was added) Now, user to click on "Delete" next to "Sakaar".

Important:

- 1. If you do not put **<your name>** / **<your first name>** in the above mentioned fields (as shown in the examples), you will get **0 points** for the question(s).
- 2. **No two students** should submit webpages with exactly the same code, content, layout, or color combination. If found, both students will get **0 points**.
- 3. When you view page source in a web browser, <!DOCTYPE html> must be at the top of every page. In other words, all pages must be written in HTML5. (-20 points if not)
 - You can put php code before <! DOCTYPE html>.
 - You cannot put html code before <! DOCTYPE html>.
- 4. Before adding PHP code, all html files must pass html validation at http://validator.w3.org/ without any error (and with only 1 warning).
- 5. After adding PHP code, the generated html code (Firefox web browser > right-click > view page source) must also pass html validation at http://validator.w3.org/ without any error (and with only 1 warning).
- 6. All css files must pass css validation at http://jigsaw.w3.org/css-validator/ without any error/warning.
- 7. If your files do not pass the html and css validations, **2 points will be deducted** for **each html or css error/warning** found (1 warning allowed for html validator).
- 8. Document (comment) your HTML files (<!-- -->), CSS files (/* */), and PHP files (/* */ OR //). Points will be taken off for insufficient comments (<!-- -->, /* */, //).

Submission instructions:

- You need to test all document(s).
- Do screen capture(s) of the **input** and the related **output(s)**. Use any graphic editing software (e.g. Microsoft Paint, Adobe Photoshop, or GIMP etc) to cut out the browser output (from the screen capture), paste them into a word document.
- Provide 2 different test cases for each question. In other words, for each question, you may need to have 2 input screen captures and 2 related output screen captures.
- Do NOT need to do screen capture(s) of html validation results and css validation results for this
 assignment.
- Save the word document as a pdf file.

You need to submit the following:

- 1. A pdf file containing the screen capture(s) of the web browser input and output pages, name the file **lastname firstname assignment4.pdf**.
- 2. All html file(s), php file(s), css file(s), and other related files (e.g. image files). Zip your file folder (lastname_firstname_assignment4) into a single zip file (or rar file) lastname_firstname_assignment4.zip. In the above example, the zip file should contain the following files and subfolders. If there is any image, there should be a \images\ subfolder.
 - lastname firstname assignment4\create db.sql
 - lastname firstname assignment4\index.php
 - lastname firstname assignment4\main.css
 - lastname firstname assignment4\richard ricardo add character.php
 - lastname firstname assignment4\richard ricardo add character form.php
 - lastname firstname assignment4\richard ricardo add country.php (extra credit)
 - lastname firstname assignment4\richard ricardo country list.php (extra credit)
 - lastname firstname assignment4\richard ricardo database.php
 - lastname firstname assignment4\richard ricardo database error.php
 - lastname firstname assignment4\richard ricardo delete character.php
 - lastname firstname assignment4\richard ricardo delete country.php (extra credit)
 - lastname_firstname_assignment4\richard_ricardo_error.php

Please submit the above mentioned **two files** (.pdf and .zip) to D2L.

Grading guidelines (programming questions):

Your programs will be judged on several criteria, which are shown below.

- Correctness (50%): Does the program compile (run) correctly? Does the program do what it's supposed to do?
- Design (20%): Are operations broken down in a reasonable way (e.g. classes and methods)?
- Style (10%): Is the program **indented** properly? Do variables have **meaningful names**?
- Robustness (10%): Does the program handle erroneous or unexpected input gracefully?
- Documentation (10%): Do all program files begin with a **comment** that identifies the author, the course code, and the program date? Are all the classes, methods and data fields clearly **documented** (**commented**)? Are unclear parts of code **documented** (**commented**)? (Some items mentioned may not apply to some languages)

A program that does not compile (run) will get at most 50% of the possible points.
