

ADVANCED MULTIMEDIA DEVELOPMENT (CIC2P13) Laboratory Three – Video Control Extra

If you create your own buttons for video control (project 1), you may encounter problems on the video control ActionScript.

This is due to the level of hierarchy we use for the ActionScript (for buttons). You need to experiment with the ActionScript hierarchy.

Examples:

Stop

```
on (press) {  
    this.gotoAndStop(this._currentframe);  
}
```

Play

```
on (press) {  
    this.gotoAndPlay(this._currentframe);  
}
```

Go To End

```
on (press) {  
    this.gotoAndStop(_totalframes);  
}
```

Rewind

```
on (press) {  
    this.gotoAndStop(1);  
}
```

Step Back

```
on (press) {
```

```
    this.prevFrame();  
}
```

Step Forward

```
on (press) {  
    this.nextFrame();  
}
```

Fast Step Forward

```
on (press) {  
    this.gotoAndPlay(this._currentframe + 48);  
}
```
